Subject: FW: note on geology section for Exec Summary
Attachments: AWP Exec Sum Geology.docx

Good afternoon. Hope all is well.

After a brief step-back, I am looking at the exec summary draft again. Thanks for incorporating much that we have provided. Please note, I am still a little uncomfortable with the paragraph on the Interior Highlands in Section 5.1.1, page 37. I have provided text here (attached) and in the full "aquifers of Arkansas" that have much preferred descriptive text. Though the text by Foti, 2008, is okay, this section is more adequately covered by the text I have provided. It includes important references to the lithology of the area and focuses on geology. This text is from myself and other professional geologists already noted as contributors. ANHC has more appropriate input elsewhere in this document. Please modify as noted. Call me if I can help further. Thanks.

Subject: note on geology section for Exec Summary

Good morning Rochelle and Kelly. Just a few quick comments on the Landforms and Geology text I have provided. Please feel free to modify the sentences as needed to make it fit the original draft. I provided you with an accurate but "quick" section of text. I welcome your assistance with this section. I am providing a revised section, since yesterday's somewhat sloppy version, and attaching it to this e-mail. Please reply with any questions or comments. Thanks.
